01.

Is skin-aging
damage
non-reversible?

As time goes by, skin stem cells weaken, the amount of collagen produced decreases, and skin becomes sluggish and thinner. The most visible result of this process are fine lines, wrinkles and dull skin. However, research has specified the cause of skin aging and the efficient and swift measures to tackle its effects. Skin aging is therefore reversible when the levels of collagen, your main skin health resource, are replenished.

The
natural
wonders of
collagen

Collagen is the main component found in the skin and it makes up to **80%** of its dry mass. Age, pollution, UV, hormones and diet affect the skin on a daily basis and break the dermal collagen. Broken collagen results in loss of the skin elasticity and suppleness and the appearance of fine lines and wrinkles.

The
collagen:
the molecule of
youth

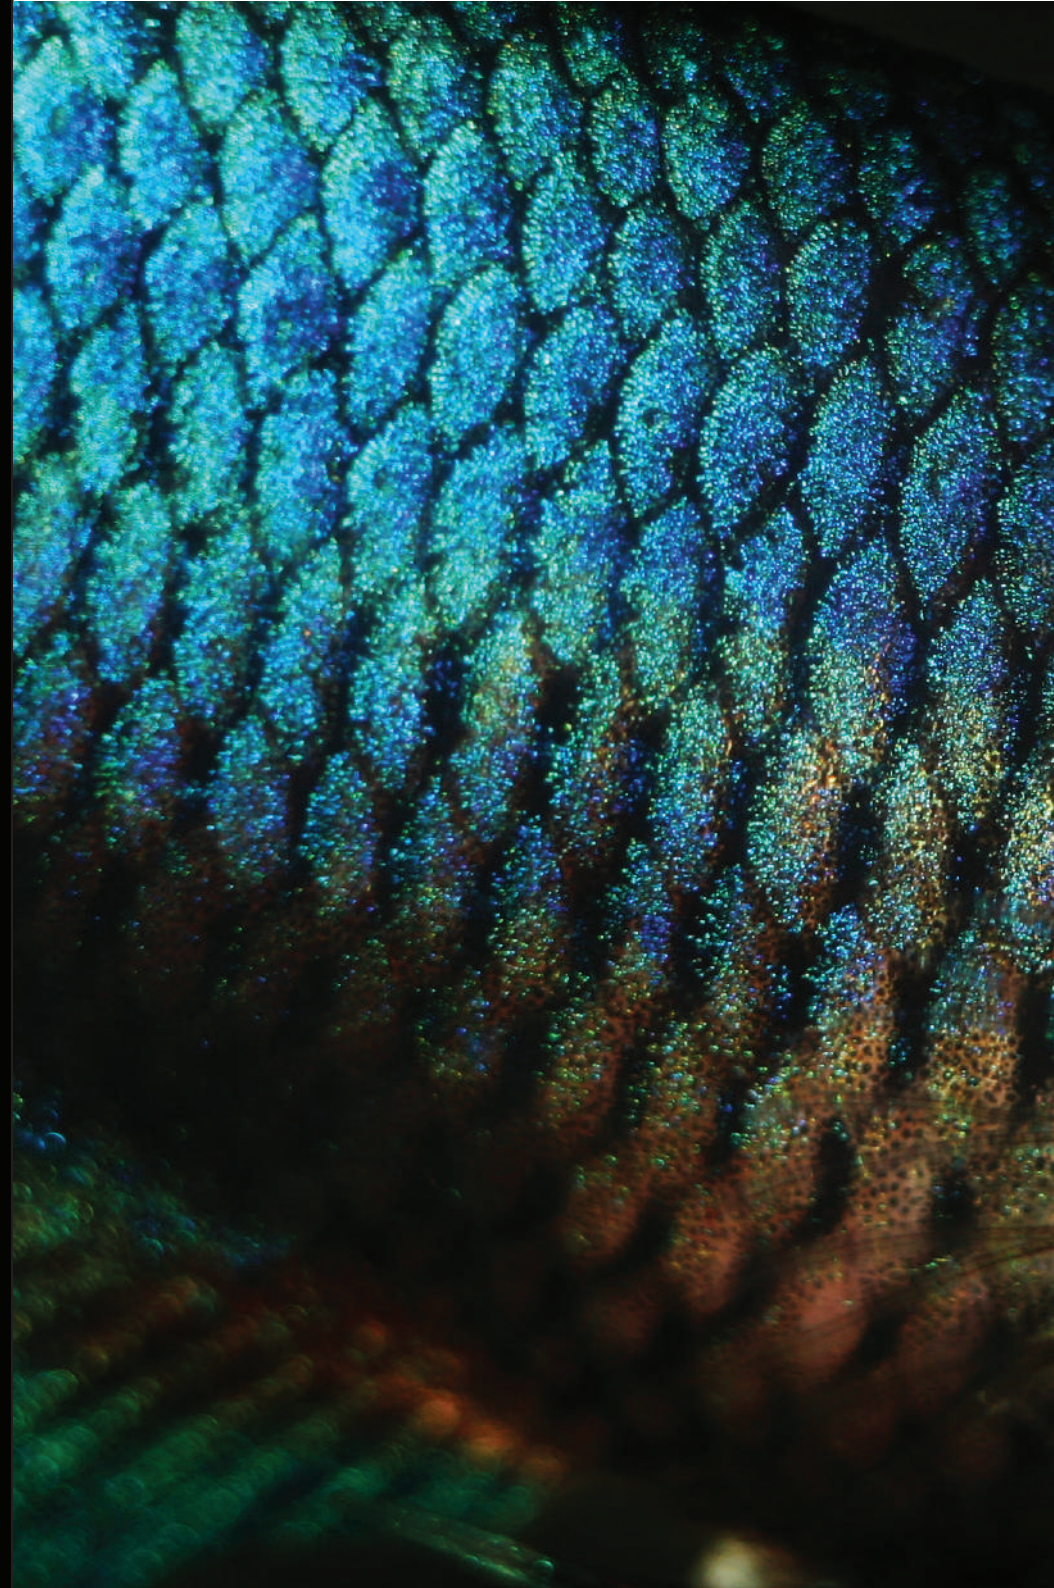

The active ingredient in Pro-Collagenium is natural collagen extracted from fish. This active ingredient provides your skin with all the essential nutrients that stimulate the production of new collagen fibers, therefore enhancing the moisture levels of your skin and slowing the process of aging.

02.

Pro
Collagenium

The
revolutionary
anti-aging
collagen

PRO-COLLAGENIUM is a concentrated (10.000 mg) ocean-sourced liquid collagen supplement. The product acts from within to enhance the aspect of your skin. When consumed on a daily basis, Pro-Collagenium is clinically tested and proven to slow the aging of all the dermal layers. Stark results can be noticed after only 3 months of regular use.

Inside out
beauty

An inside-out approach to beauty is a revolution reshaping the present and future of the beauty industry.

Science is continuously proving that beauty starts from within, and diet supplements are now more efficient in correcting deficiencies than topical products.
